Electricity Law for Environmental Advocates

Summary of Contents

Thursday, December 5, 2013

Part One

Jurisdictional Overview

I. The Federal–State Jurisdictional Relationship: Who Does What to Whom?

- A. Sale of electricity at retail, wholesale
- B. Transmission of retail electricity: bundled, unbundled
- C. Transmission of wholesale electricity: bundled, unbundled
- D. Distribution of retail electricity: "local," non-"local"
- E. "Non-local" distribution of wholesale electricity
- F. Merge with utility; acquire utility or utility assets
- G. Issue equity or debt
- H. Own, use or operate bulk power system
- I. Site transmission
- J. Site generation
- K. Construct and operate nuclear power plant

Part Two

Transmission Access and Planning

II. The Nondiscrimination Obligation: Orders 888, 889 and 2003

- A. Network service
- B. Point-to-point service
- C. Ancillary services
- D. Open Access Same Time Information Service
- E. Interconnection service
- F. Integration of variable energy

III. Regional Transmission Planning

- A. Voluntary regional transmission organizations: Order 2000
- B. Mandatory coordinated planning: Order 890

- C. Mandatory regional transmission planning: Order 1000
- D. The legal relationship between (a) federal planning obligations and (b) state integrated resource planning and retail rate cases

Part Three

Generation: Can We Reconcile FERC and State Objectives?

IV. Generation Adequacy

- A. The freeridership concern
- B. The RTO response: allocation of capacity responsibility
- C. FERC authority to uphold capacity obligations

V. Generation: Reliability, Pricing and Mix

- A. The states' concerns
- B. FERC's "Minimum Offer Price Rule"
 - 1. In general: FERC's concerns over "buyer market power"
 - 2. New Jersey and Maryland: Federal Power Act preemption of state-mandated procurement rules
 - 3. New England: Can state-supported renewable capacity be counted toward capacity obligation?
- C. *North Dakota v. Minnesota*: Can a state swear off coal without violating the Constitution?

Part Four

Effective Regulation

VI. Effective Regulators: What Are Their Attributes and Actions?

- A. The 11 key attributes, starting with purposeful, educated, decisive, and independent
- B. The difference between presiding and leading
- C. Shared stories

Friday, December 6, 2013

Part Five
Empowering Consumers to Address the Climate:
Will We Get Market Structures Right?

VII. Demand Response

- A. Definitions
- B. Access to RTO markets: FERC Order 719
- C. Compensation: FERC Order 745
- D. State options for market structures

VIII. Smart Grid

- A. Definitions
- B. Will incumbent utilities control the bottlenecks--the last mile, data and interoperability?
- C. Solutions to the bottlenecks

**IX. Solar PV, Distributed Generation, Energy Efficiency, Storage and Microgrids:
Legal and Economic Principles for the Transition**

- A. How exclusive are exclusive service territories?
- B. Who bears stranded costs?

X. Renewable Energy: Compensation and Constitutionality

- A. Can states raise the compensation without undermining federal law?
 - 1. The PURPA path
 - 2. The Federal Power Act path
- B. Can states favor in-state sources without violating the Commerce Clause?

XI. What Federal Actions Can Rationalize These Climate Change Policies?
